

# **HTML/XML CodeCount™**

## **Counting Standard**

*University of Southern California*

**Center for Systems and Software Engineering**

October , 2007

**Revision Sheet**

Date	Version	Revision Description	Author
10/22/2007	1.0	Original Release	CSSE
10/20/2008	1.1	Added example E04	CSSE
1/2/2013	1.2	Updated document template	CSSE

# Table of Contents

No.	Contents	Page No.
1.0	<a href="#">Definitions</a>	4
1.1	<a href="#">SLOC</a>	4
1.2	<a href="#">Physical SLOC</a>	4
1.3	<a href="#">Logical SLOC</a>	4
1.4	<a href="#">Blank line</a>	4
1.5	<a href="#">Comment line</a>	4
2.0	<a href="#">Checklist for source statement counts</a>	5
3.0	<a href="#">Examples of logical SLOC counting</a>	6
3.1	<a href="#">Declaration</a>	6
3.2	<a href="#">Element</a>	7

# 1. Definitions

---

- 1.1. **SLOC** – Source Lines of Code is a unit used to measure the size of software program. SLOC counts the program source code based on a certain set of rules. SLOC is a key input for estimating project effort and is also used to calculate productivity and other measurements.
- 1.2. **Physical SLOC** – One physical SLOC is corresponding to one line starting with the first character and ending by a carriage return or an end-of-file marker of the same line, and which excludes the blank and comment line.
- 1.3. **Logical SLOC** – Lines of code intended to measure “statements”, which normally terminate by a semicolon (C/C++, Java, C#) or a carriage return (VB, Assembly), etc. Logical SLOC are not sensitive to format and style conventions, but they are language-dependent. For HTML/XML, logical statements are based on tags.
- 1.4. **Blank Line** – A physical line of code, which contains any number of white space characters (spaces, tabs, form feed, carriage return, line feed, or their derivatives).
- 1.5. **Comment Line** – A comment is defined as a string of zero or more characters that follow language-specific comment delimiter.  
  
HTML/XML comment delimiters are “<!--” and “-->”. A whole comment line may span one line and does not contain any compliable source code. An embedded comment can co-exist with compliable source code on the same physical line. Banners and empty comments are treated as types of comments.

## 2. Checklist for source statement counts

### PHYSICAL SLOC COUNTING RULES

MEASUREMENT UNIT	ORDER OF PRECEDENCE	PHYSICAL SLOC	COMMENTS
<b>Executable lines</b>	1	One per line	Defined in 2.7
<b>Non-executable lines</b>			
Declaration	2	One per line	Defined in 2.4
Comments			Defined in 2.6
On their own lines	4	Not included (NI)	
Embedded	5	NI	
Banners	6	NI	
Empty comments	7	NI	
Blank lines	8	NI	Defined in 2.5
Compiler Directives	N/A	N/A	N/A

### LOGICAL SLOC COUNTING RULES

NO.	STRUCTURE	ORDER OF PRECEDENCE	LOGICAL SLOC RULES	COMMENTS
R01	<ul style="list-style-type: none"> <li>Declarations (document type, attribute, entity, text, notation, etc.)</li> <li>Processing instruction</li> <li>CDATA section, and</li> <li>Conditional section</li> </ul>	1	Count once per occurrence	
R02	A pair of start-tag and end-tag	2	Count once	
R03	Empty element tag	3	Count once per occurrence	

### 3. Examples

#### DECLARATION

##### D01 – processing instruction

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
'<?' PITarget (S (Char* - (Char* '?>' Char*)))? '?>'	<?xml version="1.0"?>	1

##### D02 – document type

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
'<!DOCTYPE' S Name (S ExternalID)? S? ('[' (markupdecl   DeclSep)* ']' S?)? '>'	<?xml version="1.0"?> <!DOCTYPE greeting SYSTEM "hello.dtd">	1 1

##### D03 – element type

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
'<!ELEMENT' S Name S contentspec S? '>'	<!ELEMENT br EMPTY> <!ELEMENT p (#PCDATA emph)* > <!ELEMENT %name.para; %content.para; > <!ELEMENT container ANY>	1 1 1 1

##### D04 – attribute type

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
'<!ATTLIST' S Name AttDef* S? '>'	<!ATTLIST termdef id ID #REQUIRED name CDATA #IMPLIED>  <!ATTLIST form method CDATA #FIXED "POST">	1  1

**D05 - entity**

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
'<!ENTITY' S Name S EntityDef S? '>'	<!ENTITY % YN ""Yes"" > <!ENTITY WhatHeSaid "He said %YN;" >	1 1

**ELEMENT****E01 – start-tag and end-tags, empty element**

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
'<' Name (S Attribute)* S? '>'	<?xml version="1.0" encoding="ISO8859-1" ?> - <note> <to>Tove</to> <from>Jani</from> <heading>Reminder</heading> <body>Don't forget me this weekend!</body> </note>	1  1 1 1 1 1 0
	<HTML> <BODY>  <P> to break lines in a paragraph, use the br tag. </P>   </BODY> </HTML>	1 1  1 2 2 0 1 0 0

**E02 - comment delimiter**

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
Comments in XML are done in the same manner as HTML comments <!-- this is a comment -->	<html>	1
	<!--To check the lines-->	
	<body>The content of the body element is displayed in your browser.</body>	1
	</html>	0
	<?xml version="1.0" encoding="ISO8859-1" ?>	1
	<message	1
	to="you@yourAddress.com"	
	from="me@myAddress.com"	
	subject="XML Is Really Cool">	
	<!-- This is a comment -->	0
	<text>	1
	How many ways is XML cool? Let me count the ways...	
	</text>	0
	</message>	0

**E03 - string delimiter(s), literals, escape characters, nesting, etc.**

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
Escape Character –Both Entity and character references may be used to escape the delimiters.  XML- &lt; &gt; &amp; &apos; &quot;  HTML 4 DTD explicitly declares 252 character entities  For E.g. &cent; &nbsp; &current Numeric character - references can also be used in XML; they are expanded immediately when recognized and must be treated as character data.	<?xml version="1.0" encoding="utf-8" ?>	1
	<string xmlns="http.....">	1
	&lt; DataSet&gt;	
	&lt;Order&gt;	
	&lt;Customer	
	&gt;439	
	&lt;/Customer&gt;	
	&lt;/Order&gt;	
	&lt;/DataSet&gt;</string>	
	<html>	1
	<body>The content of the body element is displayed in your browser.</body>	1
	<b><tt>	2
	C &nbsp; H &nbsp; E &nbsp; E &nbsp;	
	S &nbsp; E	
	</tt></b>	0
	</html>	0

**E04 – tags with attributes**

GENERAL EXAMPLE	SPECIFIC EXAMPLE	SLOC COUNT
XML and HTML can have attributes in the start tag. Attributes provide additional information about the element	<pre> &lt;note date="12/11/2002"&gt; &lt;to&gt;Tove&lt;/to&gt; &lt;from&gt;Jani&lt;/from&gt; &lt;heading&gt;Reminder&lt;/heading&gt; &lt;body&gt;Don't forget me this weekend!&lt;/body&gt; &lt;/note&gt; </pre>	<pre> 1 1 1 1 1 0 0 </pre>
